

When I watch those fence post soldiers march by, I like to watch them closely so I use a spyglass. Here's how you can make your very own telescope. (Ask an adult to help you.)

You will need ----

1. A paper towel tube (A toilet paper tube will work, too. It will just be a little shorter.)
2. Two small, thick rubberbands
3. Saran wrap or some kind of cellophane (clear) wrap
4. A pair of scissors (Adult help needed here)
5. Colored markers

Let's Get Started----

1. Begin this project by finding a space to work. (A counter top or even a corner floor space will work.)
2. Cut a small square of saran wrap (5 inches X 5 inches will work)
3. Place this square over the end of the tube.
4. Then wrap the rubberband around the end of the tube to hold the wrap in place.
5. Decorate your spyglass with colored markers.
6. Now, let's watch those soldiers march.
